Education

Thakur College of Engineering and Technology 2023 – 2027
Bachelor of Engineering in Information Technology **CGPA: 8.94/10**

Higher Secondary (12th) 65.67%

Secondary (10th) 91.20%

Technical Skills

Programming Languages: C++, JavaScript, SQL, Python (Basic)

Frontend Development: React.js, Tailwind CSS, Bootstrap, HTML5, CSS3, Responsive Web Design

Backend Development: Node.js, Express.js, RESTful APIs, API Integration

Databases: MongoDB, MongoDB Atlas, SQL

Developer Tools: Git, GitHub, Postman, Power BI, VS Code, Vercel, Render, Netlify

Core Computer Science: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, Software Engineering

Projects

FlavorFusion – Restaurant Management System | *MERN Stack* | Live Demo | GitHub 2026

- Designed and developed a component-based, responsive user interface using React.js and Tailwind CSS, with reusable modules for food ordering, table booking, and dynamic menu management.
- Developed RESTful APIs using Node.js and Express.js for order processing, table bookings, and menu operations; integrated MongoDB Atlas for persistent cloud data storage.
- Implemented dish search, category-based filtering, vegetarian/non-vegetarian selection, and price-range filtering to improve menu discovery and usability.
- Deployed the frontend on Vercel and backend on Render, working with API integration, deployment configuration, and responsive layouts across mobile, tablet, and desktop devices.

AnimesVerse – Anime Discovery Platform | *React.js, Tailwind CSS, REST API* | Live Demo | GitHub 2025

- Designed and deployed an anime discovery platform featuring **1,000+ anime titles**, enabling users to explore trending content and access detailed anime information through a centralized interface.
- Engineered reusable **React.js** components with **Tailwind CSS**, implementing **3 core discovery features**—anime search, genre-based filtering, and type-based filtering—across responsive desktop and mobile layouts.
- Integrated **REST APIs** with asynchronous data fetching and React state management to dynamically retrieve anime listings, trending content, and title details while synchronizing data with UI updates.
- Deployed the application on **Vercel** and maintained source code on **GitHub**, establishing a publicly accessible platform with a version-controlled frontend build and deployment workflow.

Experience

Web Development Intern Remote
Oasis Infobyte *Jan 2026 – Feb 2026*

- Developed a responsive landing page and a real-time temperature converter using HTML5, CSS3, and JavaScript, applying frontend development and responsive design principles.
- Used Git for version control and GitHub to manage project code, following an organized development workflow and maintaining readable, structured code.

Achievements

Solved **900+ Data Structures and Algorithms problems** across competitive programming platforms, including LeetCode, GeeksforGeeks, and CodeChef, strengthening algorithmic thinking and problem-solving skills.

Achieved a maximum **2-Star CodeChef rating** and participated in competitive programming contests.

Qualified for the **Final Round of TCET Shastra Competitive Programming Contest (SCPC) 2026** as Team Lead after advancing through Round 1.

Participated in coding, aptitude, quiz, and technical competitions through platforms such as Unstop, demonstrating continuous learning and problem-solving.
